

Q&T

EXTRUDED PARTS

Extruded Parts...

***Left to right: electrical disconnect handle,
lighting bracket, box frame.***

We can't show you your specific product until we produce it, but the extrusions shown in this brochure represent a few of the many forms and shapes we produce. Our extruded parts are typically manufactured to the following guidelines:

Diameter: Up to six inches.

Length: Far beyond the limitations imposed by the largest carrier.

Material: 6000 Series Aluminum.

Hardness: As specified, up to T6.

Finished to Your Specs

Clockwise from bottom left: heat sink for electrical controls, heat gun handle, fishing net yoke.

Our capabilities don't stop with the extrusion process. We are also equipped to handle a variety of secondary operations, including:

- Cutting
- Machining
- Slotting
- Flattening
- Anodizing
- Welding
- Drilling
- Piercing
- Forming
- Painting
- Plating
- Fabricating

Does your part require a manufacturing process not listed? Give us a call. Chances are we can handle that, too.

Need More than Extrusions?

In addition to extrusions, QS&T also manufactures...

Stamped Products — from miniature to large, 1/4" thick parts.

Heat Transfer Products — including OEM radiators, charge-air coolers, and oil coolers for the mobile and stationary equipment markets.

Metal Fabricating — forming and welding.

Please call, fax, write or visit our website for further information.
